Forsgren's Pheasant Farm Inc. est. 1968

11th MacFarlane biennial seminar

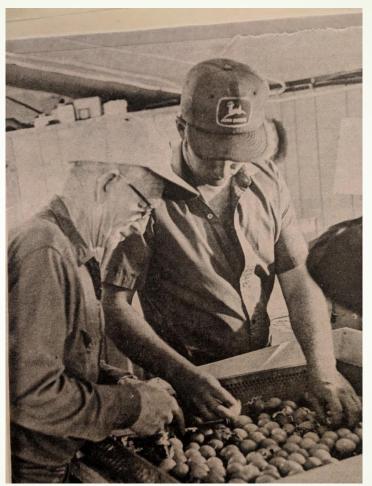

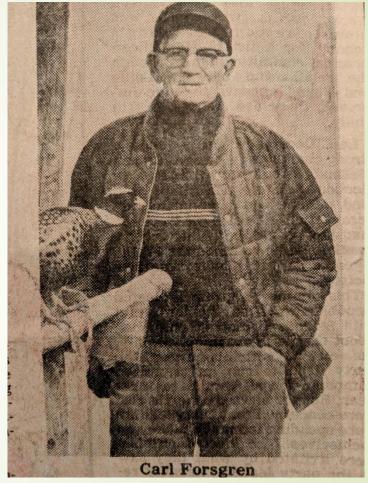

This is how the farm looked in the 50's

1968

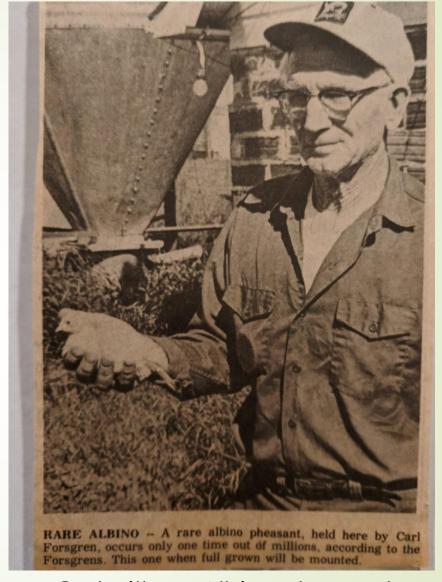

Carl & Darrel Forsgren bought 50 chicks from MacFarlane's.

A Hobby gone awry

Carl Kept 12 hens and 2 roosters and built an incubator. They hatched too many and advertised the excess. The customer ordered 500 for the next year and so it began.

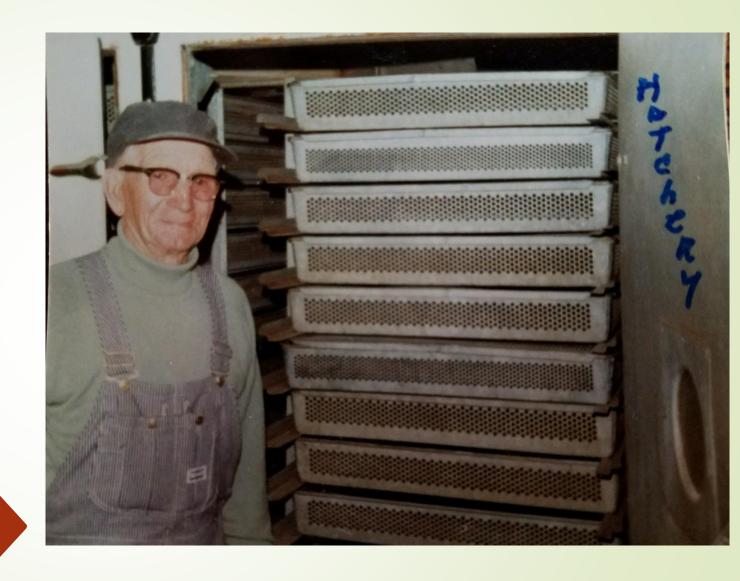

Carl with an Albino pheasant

The 1st incubator.

Upgrade to "high tech" incubator

Original location

Pour original location was a peninsula of land between two lakes. Pressure from EPA and the DNR on other area farms precipitated the move to our current location.

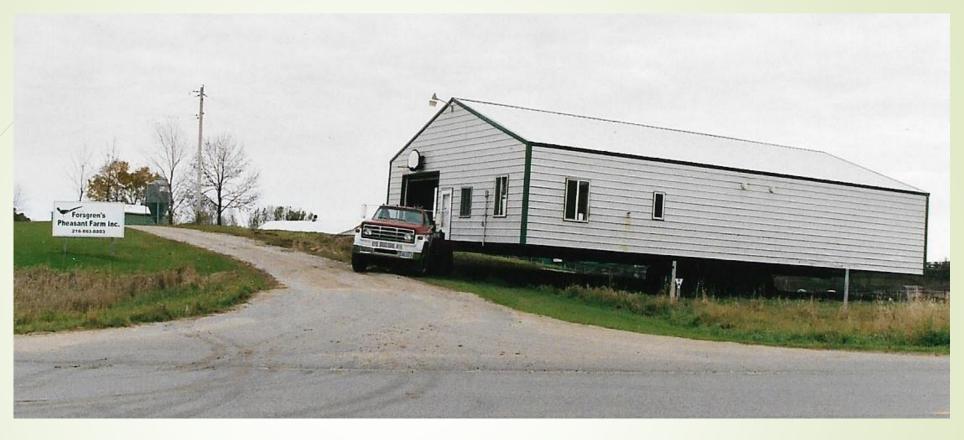

The original farm.

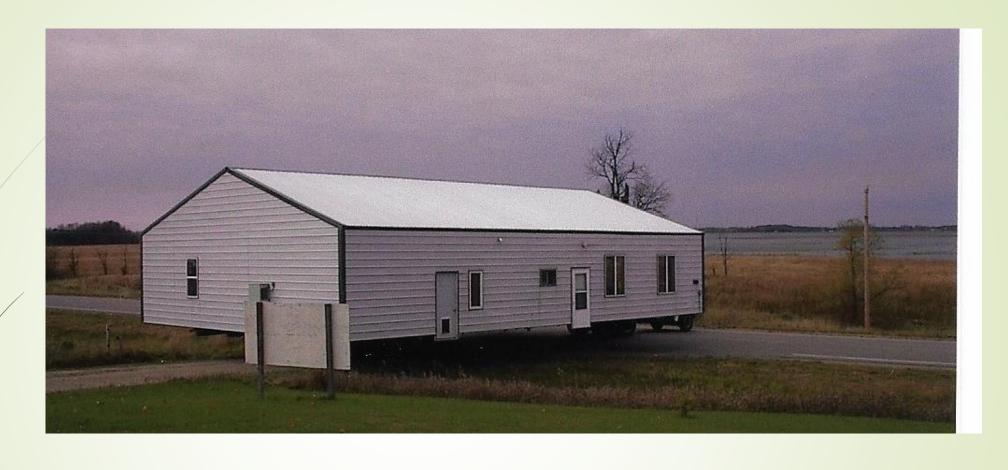

In 2004 we moved our entire farm.

We moved six buildings and built five new buildings over the course of one year. I also built a house at the same time.

The moving Company moved 3 buildings at a time.

The buildings were moved and set in place in October of 2004.

My dad forgot to take the tomatoes out of the window. They all made the 5 mile trip successfully!

The building site was prepared in July and August of 2004

The site of the new hatchery.

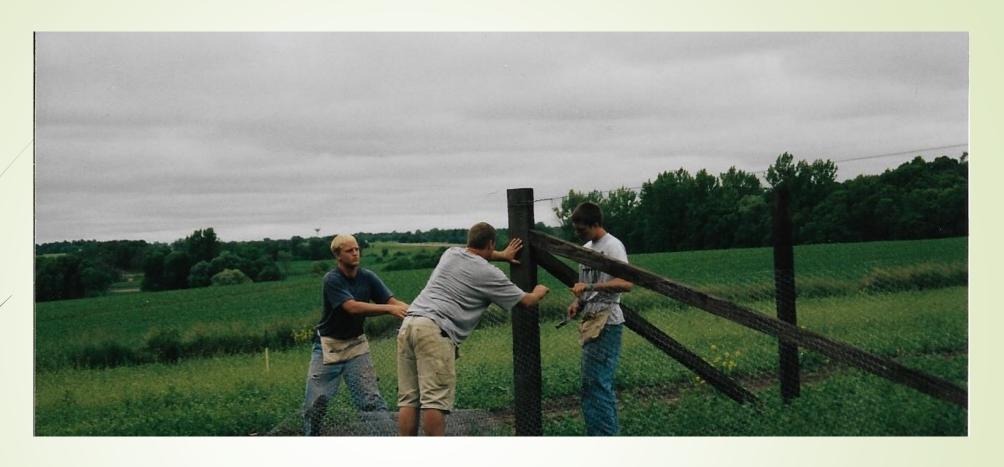

The new location was a field. No roads, no existing building site.

Pen construction started in the summer of 2004.

About 30 pens were constructed in 2004. Top nets and the remaining 10 pens were finished in 2005.

We normally had a summer crew of 3-4 people. During the moving process we had 9 summer workers.

We moved our breeding hens in January of 2005. These were the only birds moved from the old farm to the new.

New location

Farm flyover

Egg production

Our breeder barns and 2nd set of pens

Egg Collecting

Egg Washing

- Eggs are collected 6-7 times throughout the day.
- They are then washed and disinfected and put into the cooler.
- We set eggs every Monday and hatch every Friday.

Setting Eggs

Each unit holds over 21,000 eggs @ capacity

Natureform Incubators in 2014

Natureform Hatchers

Hatching

Brooding chicks

Putting down chicks

Up to 800 per stove

Chick rearing

We've used bidie drinkers in past years

We are transitioning to nipple drinkers in 2018

Repurposed flower pot

Blindering (peeping)

6 week old chicks are coaxed to one end of the barn. Then we drop the dividing net and seal each end. 2 people blindering with 3 total catchers. We do about 1500/hr.

The only actual picture of blindering

Axel likes to be involved with blindering

Blindered birds

We use clip on blinders

Birds sunning themselves

Moving birds to the pens

Main pens 1ST addition

2nd group of pens added in 2006 & 2010

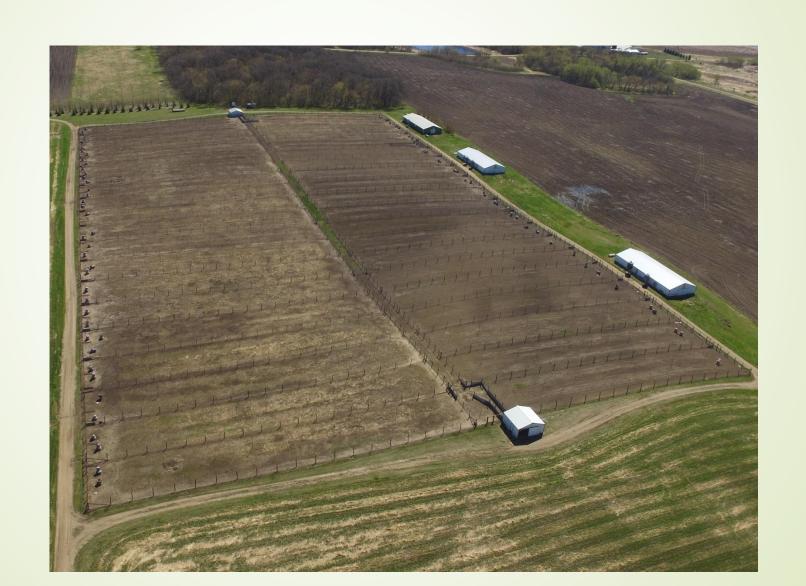

The newest pen addition

- ■12 pens built in 2014
- ■6 more built in 2015

- Building added in 2017
- →Plan for 6 more pens in 2018

Main pens with chaseway

Chasway down the center of all pens.

Holding pen attached to catch building

Chasing birds

Loading birds

Up to 800 in catch building

Axel catching a stray

A load of roosters headed to SD

Unloading birds

Unloading birds

Making feed

Making feed

Digital scale

Upgraded Feed truck mostly used for hauling bulk commodities i.e. corn, soymeal

Feeding pens

Filling Feeders

Winter of 2005

Make work fun. Even when it's not!

Tough winters
